

## MUTHAYAMMAL ENGINEERING COLLEGE

(An Autonomous Institution)

(Approved by AICTE, New Delhi, Accredited by NAAC & Affiliated to Anna University) Rasipuram - 637 408, Namakkal Dist., Tamil Nadu

MKC

2021-2022

## MUST KNOW CONCEPTS

## CIVIL

Course Code & Curse Name Year/Sem/Sec : 19CEC04/Design of Steel Structures

: III/VI

1

| Subject             |   | 16CED05 / Design of Steel structures |   |       |  |  |
|---------------------|---|--------------------------------------|---|-------|--|--|
| S.<br>No            | Term  | Notation<br>(Symbol)                 | Concept/Definition/Meaning/ /Equation/<br>Expression                                  | Units |  |  |
| UNIT:I-INTRODUCTION |   |                                      |   |       |  |  |
| 1.                  | Staggered pitch                                   | p <sub>s</sub>                       | Distance between two consecutive rivets in a zigzag riveting                          | m     |  |  |
| 2.                  | Gauge distance                                    | g                                    | Distance between two consecutive bolts of adjacent serves                             | m     |  |  |
| 3.                  | Pitch of the bolt                                 | р                                    | Center spacing of bolts in a row  | m     |  |  |
| 4.                  | Structures based on shape and geometry            |                                      | Rolled steel beam ,channel ,angle section,I- section                                  |       |  |  |
| 5.                  | Efficiency of bolted joints                       |                                      | Strength of the bolt joint/ Strength of the solid plates                              | %     |  |  |
| 6.                  | Types of bolts                                    |                                      | Unfinished (or) black bolts, turned bolts, high strength bolts                        |       |  |  |
| 7.                  | Types of weld                                     | DE                                   | Butt weld, Fillet weld, Slot weld, Plug weld, Spot<br>weld, Pipe weld, Seam weld      |       |  |  |
| 8.                  | Types of Limit<br>states                          |                                      | Limit state of collapse & Serviceability  |       |  |  |
| 9.                  | Efficiency of<br>Riveted joint                    |                                      | Strength of riveted joint/ Strength of unriveted joint                                |       |  |  |
| 10.                 | Rivet line  |                                      | Imaginary line passing through the rivets   |       |  |  |
| 11.                 | Slip factor                                       |                                      | Ratio of the load per effective interface   |       |  |  |
| 12.                 | Throat thickness                                  |                                      | Throat thickness = $0.7 \text{ X}$ Size of the weld                                   |       |  |  |
| 13.                 | Different forms of<br>structural steel<br>section |                                      | Beams, Channels, Angles, Flats  |       |  |  |
| 14.                 | High tension bolts                                |                                      | A bolt made from high strength  |       |  |  |
| 15.                 | Use of high tension bolts                         |                                      | High tensile bolt have replaced the use of steel rivet<br>in steel frame construction |       |  |  |
| 16.                 | Modes of failure of<br>Riveted Joint              |                                      | Shear failure of Rivets, Plates, Tearing Bearing failure                              |       |  |  |

|                   | Advantages of                 |                     |  |   |
|-------------------|-------------------------------|---------------------|--|---|
| 17.               | welded connection             |                     | Economy, Rigidity, aesthetic effect, versatility                                     |   |
| 18.               | Disadvantage of               |                     | Requires skilled labour, joints are over rigid,                                      |   |
| 18.               | welded connection             |                     | difficult to inspect   |   |
| 19.               | 19 Uses of bolt               |                     | Bolts can be used in both bearing and slip critical                                  |   |
| 17.               | connections                   |                     | connections  |   |
| 20.               | Disadvantage of               |                     | Rigidity of joints is reduced due to loose fit,                                      |   |
|                   | bolted connection             |                     | resulting into excessive deflection.   |   |
| 21.               | Bolted joint                  |                     | Less rigidity, easy to remove, skilled labours not required ,appearance is not good. |   |
|                   |                               |                     | Improve the rigidity ,difficult to remove ,skilled                                   |   |
| 22.               | Welded joint                  |                     | labours required, good appearance.   |   |
|                   | Nominal diameter              | d                   |  |   |
| 23.               | of the rivet                  |                     | The diameter of the shank before driving.  | m |
| 24.               | Gross diameter of             | D                   | Gross diameter = nominal diameter +clearance   |   |
| 24.               | rivet                         |                     | Gross diameter = nominal diameter +clearance   | m |
| 25.               | Effective length of           | L                   | Length for which the specified size of the weld                                      | m |
|                   | the butt weld                 | e butt weld exists. |  |   |
|                   |                               | UN                  | IT:II-TENSION MEMBERS  |   |
| 26.               | Tension member                |                     | The available length is less than the required length                                |   |
|                   | splice                        |                     | of the tension member  |   |
| 27.               | Types of tension<br>members   |                     | Wires and cables, rods and bars, built up members                                    |   |
| 28.               | Tension member                |                     | Structural member subjected to tensile force   |   |
| 29.               | Net sectional area            |                     | Gross sectional area of the member   |   |
|                   | Types of steel                |                     | Single angle, double angle placed back to back, tee                                  |   |
| 30.               | structure                     |                     | section  |   |
|                   | Factors influencing           |                     | Tomails stress type of the section areas sectional                                   |   |
| 31.               | the strength of               |                     | Tensile stress, type of the section, cross sectional                                 |   |
|                   | tension member                |                     | area pitch ,gauge and edge distance.   |   |
| 32.               | Built up member               |                     | Two or more than two members   |   |
| 33.               | Uses of lug angles            |                     | Size of gusset plate can be decreased  |   |
|                   |                               | DES                 |  |   |
| <u>34.</u><br>35. | Net effective area            | A AN ACT            | The reduced net sectional area of such a section                                     |   |
| <u> </u>          | Gross area                    |                     | Area of cross section without reducing rivet hole                                    |   |
| 50.               | Lug angle<br>Types of tension |                     | It is an short length of an angle section  |   |
| 37.               | member                        |                     | Square and circular rods, Built up steel sections                                    |   |
|                   |                               |                     | Tension splices are provided to join two length of                                   |   |
| 38.               | Tension splice                |                     | the member   |   |
| 39.               |                               |                     | Shear deformation effect.  |   |
| 40.               | Shear force                   |                     | The in plane force at any transverse cross section                                   |   |
| 41.               | Shear stress                  |                     | Stress component acting parallel to face plane                                       |   |
| 42.               | Examples of                   |                     | Single angle, double angle placed back to back, tee                                  |   |
|                   | tension members               |                     | section  |   |
| 43.               | Net area                      |                     | Net area is equal to the gross area  |   |
|                   | Single angle section          |                     | $A_{max} = A_1 + A_2 k k = 3A_1 3A_1 + A_2$  |   |
| 44.               | connected by one              |                     | $A_{net} = A_1 + A_2 k, k = \underline{3A_1}, 3A_1 + A_2$                            |   |
|                   | leg angle                     |                     |  |   |
| 45.               | Pair of angles back           |                     | $A_{net} = A_1 + A_2 k, k = \underline{5A_1}, 5A_1 + A_2$                            |   |
| 101               | to back (or single            |                     |  |   |
|                   |                               |                     |  |   |

|     | Tee) connected by  |     |   |  |  |  |  |  |
|-----|--|-----|---|--|--|--|--|--|
|     | one leg angle to   |     |   |  |  |  |  |  |
|     | the same side of a   |     |   |  |  |  |  |  |
|     | gusset.  |     |   |  |  |  |  |  |
| 46. | Design strength of tension member                              |     | Due to yielding of cross section  |  |  |  |  |  |
| 47. | T <sub>nf</sub>  |     | Nominal tensile strength of friction type bolt.                           |  |  |  |  |  |
| 48. | T <sub>nb</sub>  |     | Nominal strength of bolt under axial tension                              |  |  |  |  |  |
| 49. | T <sub>nd</sub>  |     | Design tension capacity   |  |  |  |  |  |
| 50. | T <sub>ndf</sub>   |     | Design tension capacity of friction type bolt.                            |  |  |  |  |  |
|     | UNIT:III-COMPRESSION MEMBERS                                   |     |   |  |  |  |  |  |
| 51. | slenderness ratio  |     | Ratio of effective length to corresponding radius of gyration             |  |  |  |  |  |
| 52. | Effective length of column                                     |     | Distance between successive inflection point                              |  |  |  |  |  |
| 53. | Types of column base   |     | Slab base<br>Gusseted base  |  |  |  |  |  |
| 54. | Minimum number<br>of batten plates<br>required for a<br>column |     | Not less than 3 bays  |  |  |  |  |  |
| 55. | lacing   |     | minimum radius of gyration without increasing the area                    |  |  |  |  |  |
| 56. | Batten plates  |     | connecting rolled steel section on either side                            |  |  |  |  |  |
| 57. | Basics in design of<br>compression<br>members                  |     | Assume a suitable trial section, effective length slenderness ratio       |  |  |  |  |  |
| 58. | Requirements of<br>lacing system                               |     | Uniform<br>Bars inclined at 40° to 70 <sup>0</sup>                        |  |  |  |  |  |
| 59. | Latticed column  |     | Connect the element sections so as they act as a composite section        |  |  |  |  |  |
| 60. | Gusseted base  |     | It consist of base plate connected to the column through the gusset plate |  |  |  |  |  |
| 61. | Eulers formula   | 10E | $P = \pi^2 E I / l_e^2$   |  |  |  |  |  |
| 62. | Purpose of lacing<br>and battens                               |     | Act together as a single unit   |  |  |  |  |  |
| 63. | End post   |     | End compression members are called end post                               |  |  |  |  |  |

|      | Placement Questions   |  |            |  |  |  |  |
|------|---|--|------------|--|--|--|--|
| 126. | The brick laid with its length parallel to the face of a wall |  | Stretcher  |  |  |  |  |
| 127. | In verandah (corridor) floors outward slope is                |  | 1 in 60    |  |  |  |  |
| 128. | The local swelling of a finished plaster                      |  | Blistering |  |  |  |  |
| 129. | The portion of a brick cut across the width                   |  | Bat        |  |  |  |  |
| 130. | According to ICAO, all markings on the runways are            |  | White      |  |  |  |  |

| 131. | Free body diagram is an  |        | Isolated joint with all the forces |       |
|------|--|--------|------------------------------------|-------|
| 132. | Bulking of sand is maximum if moisture content is about                            |        | 4                                  | %     |
| 133. | For masonry work with solid bricks, consistency of mortar should be                |        | 9 to 13                            | cm    |
| 134. | The forces acting on the web splice of a plate girder are                          |        | Shear and bending forces           |       |
| 135. | Settling velocity increases with   |        | Depth of tank                      |       |
| 136. | The plinth area of a building not includes   |        | Area of cantilevered porch         |       |
| 137. | Los Angeles testing machine is used to conduct                                     |        | Abrasion test                      |       |
| 138. | The meander pattern of a river is developed by                                     |        | Dominant discharge                 |       |
| 139. | Canals taken off from ice-fed perennial rivers, are known                          | $\sim$ | Perennial canals                   |       |
| 140. | Different grades are joined together by  |        | Vertical curve                     |       |
| 141. | What is the average of first five multiples of 12?                                 |        | 36                                 |       |
| 142. | What is the HCF of 1095 and 1168?  |        | 73                                 |       |
| 143. | What is the area of triangle with base 5m and height 10m                           | X      | 25                                 | $m^2$ |
| 144. | A: B: C is in the ratio of 3:2:5. How much money will C get out of Rs1260?         | X      | 630                                |       |
| 145. | What is the probability of getting an even number when a dice is rolled?           |        | 1/2                                |       |
| 146. | What is the market price of a 9% share when a person gets 180 by investing Rs4000? |        | Rs.200                             |       |
| 147. | If 30% of a certain number is 12.6, what is the number?                            | O URE  | 42                                 |       |
| 148. | Complete the series 2, 5, 9, 19, 37  | U      | 75                                 |       |
| 149. | Find the average of first 4 consecutive even numbers                               |        | 5                                  |       |
| 150. | Find the average of first 9 consecutive odd numbers                                |        | 9                                  |       |
